

Sensotec

my
Board Buddy
smartboard
magnifier add-on

- Ideal add-on to existing school systems like LVI
- Vibration-free duplication of smartboard and other projections
- Maximum magnification while maintaining image quality
- Individual color manipulation possible, also when duplicating to multiple monitors
- Also works stand-alone with a monitor
- Brand: Sensotec

Existing school systems with screen magnifier and camera are indispensable for magnifying and contrast enhancement of all analog information and for class or meeting experiences.

However problems occur when duplicating a smartboard or digital projection. A splitter does not allow magnification or color manipulation. A camera shows too many pixels and insufficient contrast. In these cases, **my Board Buddy is the ideal solution** as add-on, but the device can also be used as stand-alone in combination with a monitor.

- Developed by Sensotec for school and professional applications
- Works perfectly stand-alone with monitor as well as add-on to existing school systems
- Easy and fast operation via the joystick and the colorful buttons
- Simple software & installation management, no adaptation of existing infrastructure needed (if network available), works wireless or via network cable
- Multi-usage because of the possibility to duplicate to multiple "Buddies"
- Provided with unique software: the teacher decides what is shown when and to whom

Technical specifications my Board Buddy

Dimensions & weight	120 x 60 x 40 mm 160 g
Operating system	compatible with Windows 7 or higher
Processor	Quad-core ARM
Screen	connectable to a full HD screen with HDMI output (1920x1080)
Connectivity	wireless or via network cable
In the box	controller & processor + Vesa mount
	power supply
	manual
