

Sensotec

Simplified Controller for LVI AIR schoolsystems

- Comfortable and user-friendly controller
- Featuring tactile buttons and an intuitive joystick
- Bright colors and clarifying icons
- Set your favorite screen-positions
- Brand : Sensotec

Simplified Controller

Thanks to this simplified controller, specially developed by Sensotec, visually impaired students can easily manage the functions of their LVI AIR schoolsystem.

What is the simple controller?

This controller is designed to replace the Xbox controller of the LVI's school set without any modification to the device. Plug into a USB port and it's ready to use. Unlike the Xbox controller, you do not need to turn it on.

The clarifying symbols on the controller allow both the student and the instructor to operate the controller easily. Even for very young children.

Innovative solution

This controller is the ideal tool to offer more independence to visually impaired students, enabling them to use their LVI school set more intuitively.

With the colored buttons, clarifying symbols and integrated joystick, students can use their device more easily than with the Xbox controller.

What buttons and functions do we have ?

- **Bottom green button** : allows the user to select the camera that will be controlled by the controller. The selected camera is surrounded by an orange border on the screen. Of course, it is only possible to select another camera if several image sources are available.
- **Top green button** : Used to set the split screen if there are multiple image sources.
- **Red button** : converts the image from color to black and white and vice versa.
- **White button** : allows the user to set high contrast.
- **Yellow buttons** : allow to zoom in and zoom out.
- **Joystick** : Use it to move the camera. It is possible to operate gradually. A small movement causes the camera to move slowly. If you choose the outer limits then the camera moves at its fastest.
- **Black buttons marked 1, 2 & 3** : these buttons match the preferred positions of the remote camera. Press these briefly to recall them.

Technical specifications

Dimensions	12 cm x 8,8 cm
Weight	215 grams
Materials	PLA
